

BioTools Systems biology Report

Author: Bruno Sá, Carissa Bleker, Anže Županič, Miguel Rocha

Date: June 30, 2025

Data source: bio.tools Web API (June 26, 2025)

In this report we will analyze the data extracted from the BioTools database more specifically related to the topic 'Systems biology' using the bio.tools Web API.

Automated Report

This notebook is **automatically generated** by querying the [bio.tools](#) Web API for the topic *Systems biology*.

All available data is fetched, programmatically parsed, plotted, and rendered in-line.

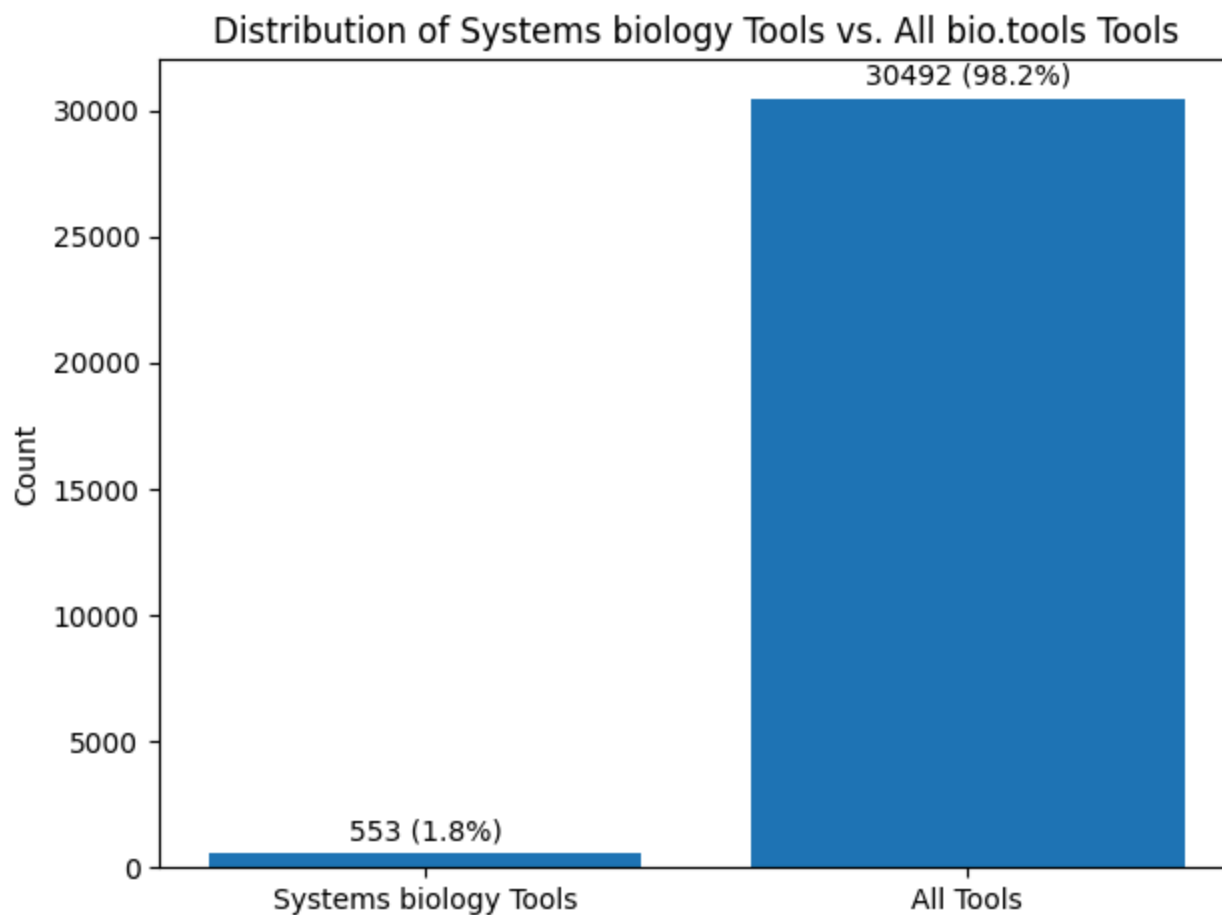

Because the bio.tools schema is consistent across communities, you can adapt this exact code simply by changing the community identifier to produce reports for any other domain.

All available topics can be found in the [BioPortal - EDAM](#).

Tools Extraction

A total of 553 tools were extracted from the bio.tools database by filtering the topic 'Systems biology'.

As shown in the bar chart below, 553 out of 30492 total tools ($\approx 1.8\%$) are tagged under *Systems biology*.

Attributes Analysis

In this section, we will analyze all the attributes of the tools related to 'Systems biology' extracted from the BioTools database:

Note: Detailed definitions for each attribute are available in the [BioTools Curators Guide](#).

Name

A total of 553 unique names were found for the tools related to 'Systems biology'.

Column name: name

Total number of tags: 553
Number of empty tags: 0
Percentage of empty tags: 0.00%
Number of unique tags: 553

Any additionnal notes can be inserted here.

Description

A total of 553 unique descriptions were found for the tools related to 'Systems biology'.

Column name: description

Total number of tags: 553
Number of empty tags: 0
Percentage of empty tags: 0.00%
Number of unique tags: 553

Any additionnal notes can be inserted here.

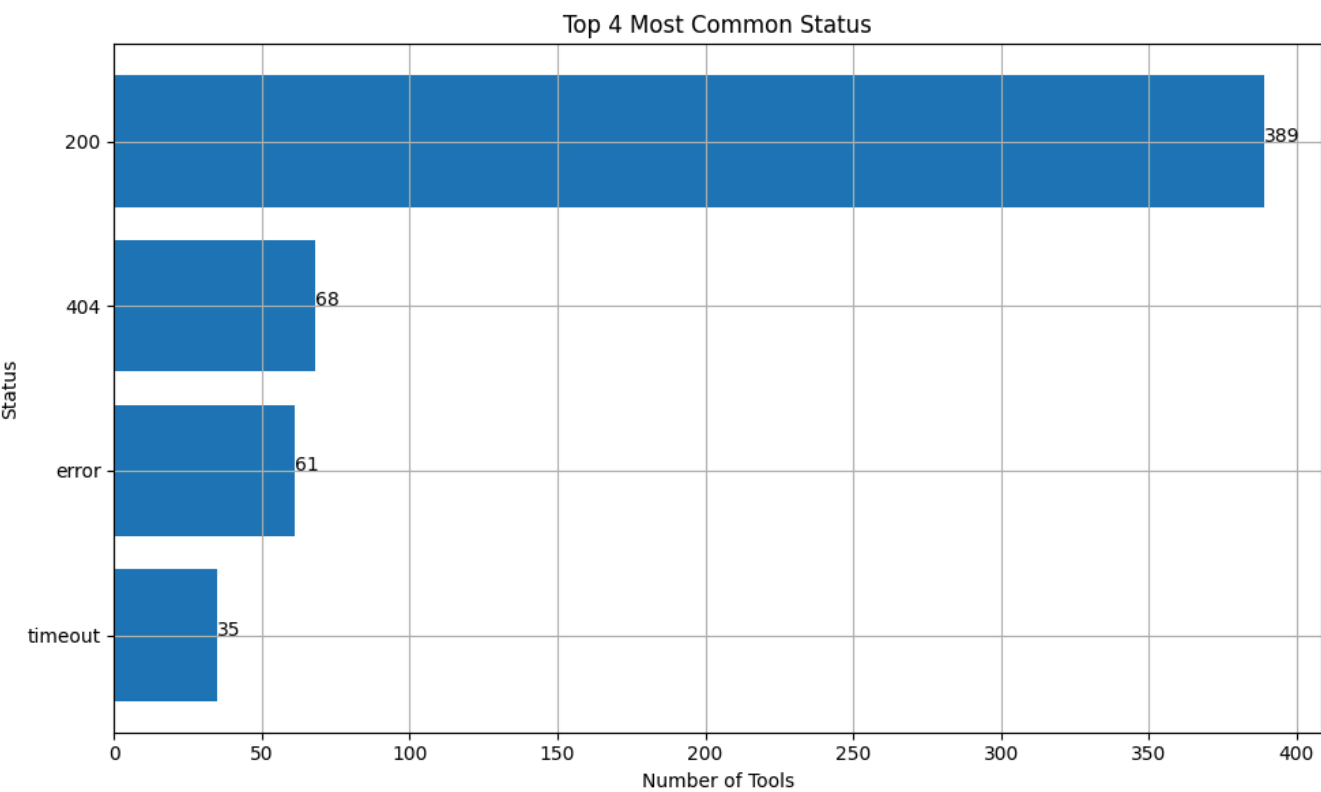

Homepage

A total of 549 unique homepages were found for the tools related to 'Systems biology'.

Column name: homepage

Total number of tags: 553
Number of empty tags: 0
Percentage of empty tags: 0.00%
Number of unique tags: 549

In order to check the availability of the homepage, we will use the check_url function to check the status of the homepage. Available (200), were not found (error 404), not accessible (several different errors) and timeout (no response in 2 seconds time).
